

# Erika Chen Elston

Austin, TX | eelston@umass.edu | (512) 954-2380 | linkedin.com/in/erikacelston

## Summary

Driven EE junior with a history of strong academic performance and a commitment to learning in any situation. Particularly interested in exploring embedded systems and semiconductor manufacturing (validation, innovation, cleanroom).

## Education

**University of Massachusetts Amherst** – BS in Electrical Engineering, **3.91 GPA** Expected 2026  
Minor in Computer Science, Commonwealth Honors College Member

**Coursework:** Intro. Embedded Systems, Intro. Digital & Computer Systems, Continuous Time Signals & Systems, Programming Methodology/Test Principles; Current: Signal Processing Methods, Fundamentals of Semiconductor Devices

## Skills

**Programming/Software:** C, Python, JavaScript/TypeScript, MATLAB, PuTTY, LTspice, Microsoft Excel  
**Hardware:** ATmega328P (8-bit MCU), BeagleBone Black (32-bit MCU), Soldering, Electronics Lab Equipment  
**Language:** Mandarin Chinese (limited working proficiency)

## Projects

**University Weather Data Application** Spring 2024

- Led 2 peers in implementing a JavaScript application that collects weather data for universities based on user query using information fetched from web interfaces (APIs) providing university name, geographic location, and weather data
- Ensured each contributing asynchronous function consistently performed as desired through potential API issues, such as failed fetches or server errors, simulated using Jest framework mock testing
- Used GitHub version control to facilitate distribution of work and group code review before merging contributions

**KIM-1 LED Matrix Art** (Independent Project) Spring 2023  
Demoed at M5 Circuits & Code: [eelston.github.io/projects/pixelart](https://eelston.github.io/projects/pixelart)

- Used assembly language programming to display pixel art patterns on Adafruit DotStar 8x8 LED grid with patterns selected through corresponding KIM-1 clone keyboard input
- Designed a Python automation script to convert custom patterns written as a sequence of colors into assembly language, reducing the time needed to write code and test the appearance of different hex color codes on the LED grid

**Housing Price Prediction ML Algorithm** Spring 2023

- Applied linear regression and gradient descent in order to implement a machine learning algorithm designed to estimate the price of a given house based on 25 property features using Pandas, NumPy, and Matplotlib Python libraries
- Evaluated prediction quality by observing learning curves and final mean square error (MSE) of training dataset in comparison with testing dataset predictions and MSE, lowered learning rate appropriately to eliminate overshoot

## Experience

**Peer Advisor**, UMass Department of Electrical & Computer Engineering – Amherst, MA September 2024 – Present

- Hold weekly drop-in office hours for undergraduate students, answering questions regarding academic challenges, time management, and course scheduling
- Assist in planning community-building events within the ECE department and engage in student and faculty outreach

**Secretary**, Dean's Undergraduate Student Advisory Group, UMass College of Engineering September 2024 – Present

- Record meeting minutes and communicate with other advisory group members on behalf of the chair
- Represent peers in electrical engineering in discussions with the Dean and faculty on subjects such as course content improvements, academic success, and student well-being

**Dishwasher**, 1431 Café – Cedar Park, TX July 2023 – August 2023

- Scrubbed, loaded, and restocked dishes quickly and efficiently to support kitchen staff and customer needs
- Adapted to shifting priorities to meet the demands of a face-paced restaurant environment

## Activities & Interests

Society of Women Engineers, Brazilian jiu-jitsu, running, crochet, percussion
